

Pastured Pig Production & Feral Pig Diseases

An information seminar and opportunity to meet other producers
and animal health professionals

<https://ucanr.edu/survey/survey.cfm?surveynumber=241>
56

Date: Thursday, March 1, 2018

Time:

- Welcome & refreshments: 2:45-3pm
- Seminar: 3-4pm
- Questions: 4pm

Where: Norton Hall
University of California Cooperative Extension
70 Cottonwood Street, Woodland, CA 95695

Refreshments provided by UC ANR
Cheese donated by Cowgirl Creamery

Learn about best practices for swine health and biosecurity, current disease surveillance in feral pigs, latest swine health disease outbreaks, and current research opportunities.

Who Should Attend this Seminar:

- If you raise pigs outdoors for commercial or backyard production
- If you are impacted by feral pigs and/or have feral pig intrusions on your farm or ranch
- If you want to learn about biosecurity or mitigation strategies to protect livestock from feral pigs

- Laura Patterson: lpatters@ucdavis.edu

This is a brief seminar to learn about diseases harbored in feral pig populations in California that may affect pastured pork production.

This seminar will provide an opportunity to meet your local farm advisors (UCCE), extension specialists (UCD Vet Med), and government representatives (USDA APHIS, CDFA, USDA WS).
